Starting :

23.01.2021

Duration:

Six Months

Charter Member:

International Federation of Purchasing and Supply Management, USA

ABOUT IIMM

Indian Institute of Materials Management is the premier professional Institute of Materials Management in India. Our mission is to “promote professional excellence in materials management towards national prosperity through sustainable development” through its national network of 52 branches and 19 chapters spread over the length and breadth of the country. IIMM is dedicated to the professional activities including Educational Courses, Executive Development Programs, Seminars, Workshops, In-house Training Programs and consultancy.

INTERNATIONAL AFFILIATION

To have an effective global interaction on the subject, IIMM is a charter member of International Federation of Purchasing and Supply Management (IFPSM), USA which has its roots in 33 countries from all the six continents, representing views of Purchasing and Materials Management professionals world-wide. Its major aim is to encourage professional development, education and cross-cultural exchange and cooperation in Purchase, Materials Management, Logistics, International Trade and other related disciplines.

IIMM ASSOCIATION WITH ITC UNCTAD / WTO

The International Trade Centre (ITC) UNCTAD/WTO is the Focal point in the United Nations for Technical co-operation with developing countries in trade promotion. As an executing agency of the United Nations Development Program (UNDP), ITC is directly responsible for implementing UNDP financed Projects in developing countries and economics in transition related to trade promotion.

OBJECTIVE OF COURSE

The primary objective of these courses is to impart the relevant necessary knowledge and skills on the some of the important areas in each of the courses. The course will cover some of the basic theories relevant to the field and go on the build on the improvements and latest technology in the relevant field. It is expected that the freshers and the working professionals will be benefitted. The latest knowledge and skillset will enable the individuals to outperform in their functional areas and enable them to rise to

FACULTY

The sessions will be handled by Senior faculty from IIMM, who are specialists in Supply Chain Management domain, and have rich Professional and Industry experience.

QUALIFICATION

Qualification for joining this program

- i. An undergraduate degree in any discipline with at least 50% grade**
- ii. Engineering diploma holders with 2 years practical experience in an organization.**

WHO WILL BENEFIT

Persons working in Supply Chain Management or related functions in any industry or Government organizations will benefit from the program. The program is aimed at both individuals at the abinitio level as well as those with experience in the field.

This course is aimed at individuals working in any function in a manufacturing or service industry and interested in updating/upgrading the skills set required in the current competitive environment. Individuals at the entry level and individuals with experience will derive competitive advantage with this additional qualification

COURSE SCHEDULE

The course will be for 6 months duration

Admission Notice	: Last week November 2020
Commencement of admission	: Second week December 2020
Classes commences	: 23rd January 2021
Examination for first batch	: June / July 2021
Announcement of results	: July 2021 Last week

These dates are provisional and subject to change.

TEACHING METHODOLOGY

The Classes will be conducted Online on Microsoft Teams Meet Platform in an interactive mode.

The Lecture sessions will be conducted as per details below:

Fridays: 19.30 to 21.00 hours

Saturdays: 19.30 to 21.00 hours

Sundays:

Morning Session 09.30 to 11.00 hours

Afternoon Session 14.00 to 15.30 hours

ATTENDANCE

Minimum of 75% Attendance in each subject is mandatory for appearing for the Examinations

However, relaxation will be allowed for individuals who have 50% attendance with a penal fee of Rs. 500 per subject. In all such cases the individuals will not be eligible for distinction or first class.

ASSESSMENT

The students performance will be assessed on the following framework:

Assignments :	20 marks
Attendance	5 Marks (Class + Minimum a Monthly Lecture Programs)
Final Examination(Online) 50 Marks	
Viva-voce:	25 Marks

Class room sessions will include presentations, videos, discussion on case studies. Students are encouraged to bring live case studies on the relevant subjects for discussion in the class (if allowed by the organization) for the benefit of all the students.

COURSE FEES

Total Course fee is Rs. 18,000/- inclusive Study Materials. Examination Fees INR 2000. IIMM Members are entitled for a rebate of 5 % on the course fee only. Postage for Study materials INR 600 only(inland). For participants from abroad, rates as applicable to their locations will be charged. **A set of latest prints of Text books will be provided for each subject.**

All course fee must be paid through demand draft or through internet transfer only. Details of bank account are given at the end of the prospectus.

ACCOUNT DETAILS:

Beneficiary Name: Indian Institute of Materials Management

Bank: Canara Bank Branch: BSNL Complex Branch Account Number: 0792101031770

IFSC code: CNRB0009833 GSTNo:29AAAAI0056P1ZF

Course Content

PAPER	SUBJECT	MARKS
1	Purchasing Management	100
2	International Trade	100
3	Logistics Management	100
4	Inventory Management	100
5	Information Technology & E-commerce	100
6	Operations Management	100

Certificate and Ranking

Candidate successfully completing the program will be awarded the Completion Certificate from Indian Institute of Materials Management, Bangalore Branch.

The following criteria will determine classes in the examination:

Greater than 75%	-	Pass with Distinction
60% to 74%	-	Pass with First Class
50% to 59%	-	Pass
Less than 50%	-	Fail

Repeaters and those who skip the examination without a valid reason and prior intimation before the date of the examination will not be entitled to get First Class or Distinction

Individuals who could not take the examination at the first instance and individuals who have failed to get the minimum percentage of marks will be given an opportunity to appear once again during the next cycle.

Repeaters re-appearing for the exams are required to pay an examination fee of Rs. 300 per subject towards the conduct of the examination

Individuals who fail to qualify in the repeat exam must appear along with the next cycle examination. Individual will be allowed a maximum of 3 attempts (including the first attempt) and must qualify for the certificate within a maximum period of 12 months

Prospectus

The prospectus and application can be obtained from IIMM, Bangalore Branch

Membership

It will be in the overall interest of the candidates to become members of the Institute (if not already a member) by which they will be entitled for concession in participating in the various programs of the Institute, besides the other benefits of free periodicals, free participation in the lecture programs etc.

Syllabus

Inventory Management

Introduction - Need for inventory, importance of inventory, objectives of inventory management, Impact of inventory on profitability, Factors influencing inventory.

Types of inventory – categorization like raw materials, etc.

Purchasing cost, holding cost, total cost of acquisition and activity based costing role in inventory costing

Concept of selective inventory control, classification in to various types like ABC, etc. influence of variety reduction, coding and standardization in inventory management

Concepts of EOQ, safety stock, service level and its relationship to safety stock

Inventory management systems - Fixed Time system, Perpetual review system, bin systems, Vendor managed inventory systems, etc.

Concept of MRP, study of MRP system and its components, usefulness of MRP, strengths and limitations of MRP systems

WIP, FG inventories and their relationship to product and manufacturing processes

Management of spare parts inventories for capital equipment. Planning for spares under various circumstances. Optimization in spares management

Warehousing and inventory operations. Equipment, systems, warehouse design, measuring efficiency of warehouse operations, warehouse layout, reporting of inventory

Valuation methods adopted in inventory for raw materials, work in progress and finished goods, accounting for loss, damages, etc.

Information Technology and E-Commerce

Introduction to computers - elements of computers, history and evolution of computers, operating system of computers, current trends in computing technology, utility and application of computers in various fields

Information systems – definition, data and information, components of information system, types of information system and the development of systems. Issues in development, implementation and evaluation.,

Database Management systems (DBMS) - Data concept, hierarchy, access methods, data processing, types of data processing. Application of DBMS need and advantages and disadvantages

Internet - History of internet, Role of internet, internet technology and terminologies, players participating in the functioning of internet. Tools of internet

E-Commerce - Meaning, history, features of e-Commerce, advantages and disadvantages of e-commerce, functions of e-commerce, e-commerce business models.

Implementation of B2B e-commerce systems - advantages, effects, issues in implementation, internet systems and EDI systems. Components of EDI systems advantages and disadvantages

E-governance, various systems related to governance and communication

Legal issues related to e-commerce, IT act, digital signatures, applicability of the act for e-commerce

ERP systems. SAP an example of ERP systems

Logistics Management

Logistics - Objectives and Concepts

Supply chain management - fundamentals, flows of materials, information flows, strategies in supply chain management, relationship between customer, supplier and the manufacturer

Warehouse management - design principles, operation planning and cost reduction, warehousing and stores operations. Storage systems - various types, applications - advantages and disadvantages of systems

Material handling - Principles, guidelines and technologies in material handling systems, new developments and automation in material handling.

Syllabus

Logistics Management (Continued)

Transportation - Role of transportation, types of transportation, factors affecting economics of transportation, total transportation cost, inter modal transportation, legal aspects related to transportation

Physical distribution - activities, principles and related cost. Elements of cost in physical distribution. Efficiency - evaluation of system of physical distribution. Outsourcing - 3PL and 4PL systems and service providers and their responsibilities. Reverse logistics - challenges, system design. Need for efficient reverse logistics system

Channel management - design, physical flow in channel, structure of channel, functions of channels. Channel partner - selection and responsibilities.

Logistics systems - function in the company, logistics structure in the company, design of logistics function in the organization

Logistics information systems, Principles, system architecture. Planning and coordination of information systems. Information flow in the system. Technologies in the logistics operations

Government policies and regulations related to logistics. Legal issues in logistics

Operations Management

Introduction - Nature, scope, and importance of operation management. Decision making and advanced statistical techniques in production management

Strategies in business and its relationship in operation management. Importance of operation strategies in business strategies. Demand forecasting – Need, short term and long term and other forecasting modelling

Production process - Classification, product and process design - selection, managing change, plant layout and design, product lifecycle. Process planning, facilities planning, manufacturing automation. Environmental factors affecting manufacturing process.

Production planning and control - various planning processes. Resource planning - related planning systems like MRP, etc.

Shop floor planning, scheduling and relationship with various types of manufacturing systems like job manufacturing, batch manufacturing, etc. line of balance method – scheduling and controlling production delivery schedules

Purchase and inventory management - functions, processes related to purchasing, inventory, storage and material handling systems.

Job design and work measurement, employee productivity - measurement, methods of improving productivity, learning curves and incentives for improving productivity

Quality control and management of quality, tools and methods of quality management including TQM, etc. tools for analysis and techniques for quality.

Lean manufacturing, total productive maintenance management, maintenance methods and techniques
